## WEAR AND CORROSION PROTECTION

We offer our clients various rubber, ceramic and polymer coatings against wear and corrosion. We can handle coatings from single pieces to series. We can make coatings for mixers, process tanks, storage silos, pipe rubber lining up to 12 metre long and other coatings for various wear parts etc.

Selection of the coating material is critical to ensure the best possible durability and other properties. We choose coating materials in co-operation with our material suppliers.

We make rubber lining by cold- and hot vulcanization. We have six autoclaves. Diameters from 1,5 to 4,0m. With 2x10t cranes it's possible to handle heavy items.

## FULL SERVICE

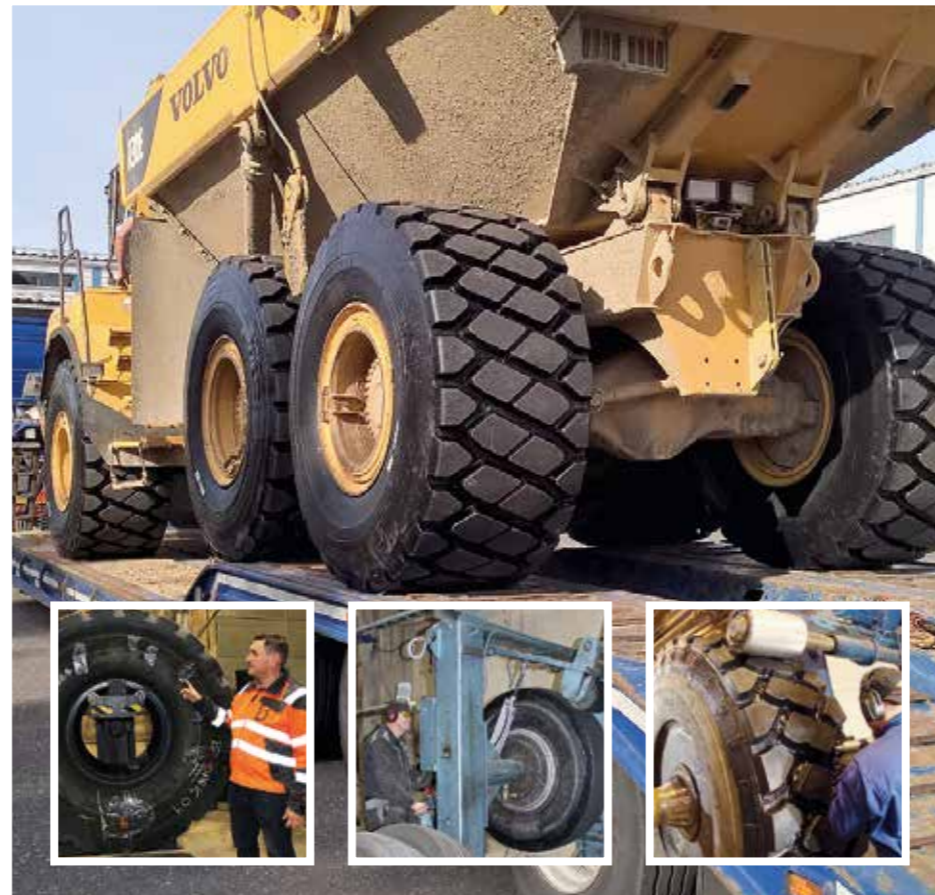

In cooperation with other Kutepa Group companies we offer complete service from design to installation and maintenance. Including design, metalwork, sandblasting, coating, painting, assembly, electric, insulation and installation.

We can work in our factory or in customer plant. We can arrange transportation, scaffolding and sandblasting if needed. Our office and factory is located in Kuortane, Mäyry.

## SOUND DAMPING

We make sound damping using the Noxudol® compound. The product has good thermal insulation properties against condensation and it contains anti-rust solvent. After process compound can be painted.

The product is suitable for metals and plastics with a thickness of 0.5-5.0 mm such as car bodies, ship hulls, ventilation pipes, etc.

## Kutepa Rubber Service Oy

### RETREADING AND REPAIRING FOR ALL KIND OF TYRES

#### TYRE RETREADING

High quality tyre can be retreaded several times. Tyre will be repaired and returned back to its original condition by retreading process. Right tread model may give you more hours than original one. Retreading can be done to customer's casing or you can buy casings from our comprehensive stock. All tread models can be used for every casing.

#### SAVING RAW MATERIALS

By retreading you need half of new tyre raw materials. When retreading tyre 2-3 times number of discarded tyres will be substantially reduced. Remaining junk casings will be recycled by Suomen Rengaskierrätys Oy. We do not use materials which contains harmful aromatic oils.

#### FORK LIFTER AND INDUSTRIAL TYRES

Solid and pneumatic tyres. Solid tyres can be retreaded with rims and may be retreaded up to ten times depending on the application. Stainless treads optionally for many sizes.

#### TRACTOR AND FORESTRY MACHINE TYRES

Forestry tyres may be repaired several times. Damages can be cuts or punctures but all damages will be repaired with one cure. The faster damaged tyre will get under repair the more there is chances to success. Almost all kind of damages can be repaired. Winter pattern is most wanted tread model for tractor tyres.

#### REPAIRS

Most of repairs will be done by curing in autoclave. Maximum tyre diameter for autoclave is 4000 mm.

**GUARANTEE** We grant a full guarantee for all tyres retreaded or repaired by us. We guarantee raw materials and retreading process to be accurate. The warranty is valid for 3 years after retreading date.
